2: General information

Dear Colleague

Momentum authorises the medical doctor to perform a lung function test showing a flow-volume loop. We require no comments or interpretation. Explain the procedure carefully to the client and make sure that he/she understands what is expected of him/her.

When the results are abnormal, it is important that you achieve optimal patient cooperation by obtaining at least three efforts of which the results differ by less than 5%.

For persons suffering from obstructive airways disease, repeat the efforts after you have given a bronchodilator inhaler to the patient to evaluate the reversibility of the airways obstruction.

Please note: The insured life has authorised Momentum to obtain this information from you, for purposes of underwriting and/or claims assessment, and to share it with other life offices direct or through the database operated for and on behalf of the life offices by applicable life assurance association. Under the protocol, the insured life may enquire about information that the database operated for and on behalf of the life offices by applicable life assurance association holds and his/her nominated medical doctor will make such information available to him/her.

Yours faithfully

Myriad underwriting
